MOBILE HEALTHCARE PROGRAMME FOR THE AGED IN 20 LOCATIONS ACROSS INDIA

Analysis & Findings of Baseline Survey Conducted for implementation of Mobile Health Care Programme for the Aged in Operational Area of Uran MMU under ONGC Uran Asset

Project Implemented by

HelpAge India | Fighting isolation,
poverty, neglect

Study conducted by

Four x 4
Empowering People

Analysis & Findings of Baseline Survey Conducted for implementation of Mobile Health Care Programme for the Aged

Unit: Uran (MMU MIS Location Code: 1313)

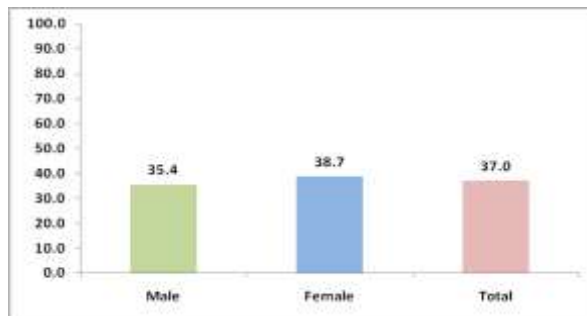

Background

Uran ONGC has its operations limited to a plant which is located on the outskirts of Mumbai mega-city. The plant was established after acquiring land from adjacent villages. Therefore, the target villages surrounding Uran were identified in consultation with the concerned ONGC officials. Accordingly, the survey was conducted to identify all households with elderly persons (aged 55 years and above) in the selected villages. Details are available in Table 1.1.

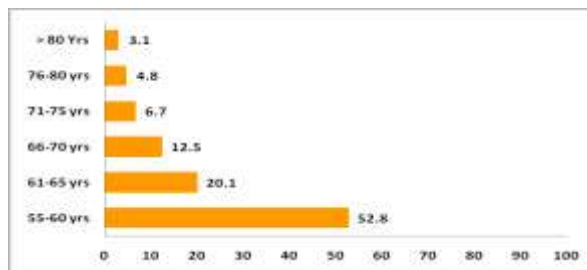

Demography

Of all the 2333 households, more than 4% are Below Poverty Line (BPL) whereas the rest (almost 96%) belong to the Above Poverty Line (APL) category. Out of the total members of all the surveyed households, elders constitute more than 37%. Male elders are almost 35.5% and female elders are more than 38.5%. Details are available in Table 2.1.

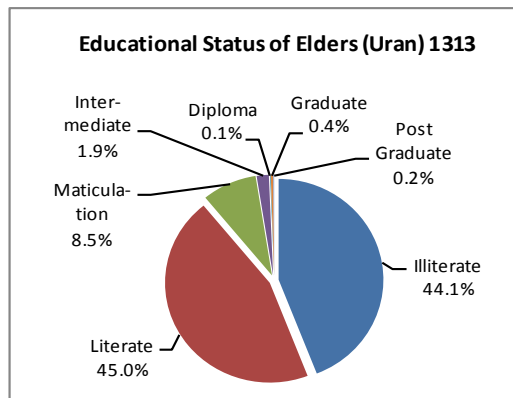

When one looks at the percentages of elders in different age groups, the 'above 80 years' category is at the bottom and the percentage increases with each successive younger age group among elders. The percentage of the youngest age group among elders is the highest among all. Details are available in Table 2.2 to Table 2.3.

Education

Data on educational status on elders reveal that more than 44% are illiterate and out of the rest 45% are just literate. Matriculates are 8.5% and intermediates are almost 2%. All other categories are all much below 1% level. Details are available in Table 3.1 to Table 3.8.

Out of all elders more than 76% are not working. Among non-working elders percentages of women elders across all age groups are far more than men elders. At the other end, across all age groups of elders the percentages of working elder men are far above working elder women. Working men and women were found across all age categories. More details are in Table 4.1 to 4.2.

Disability

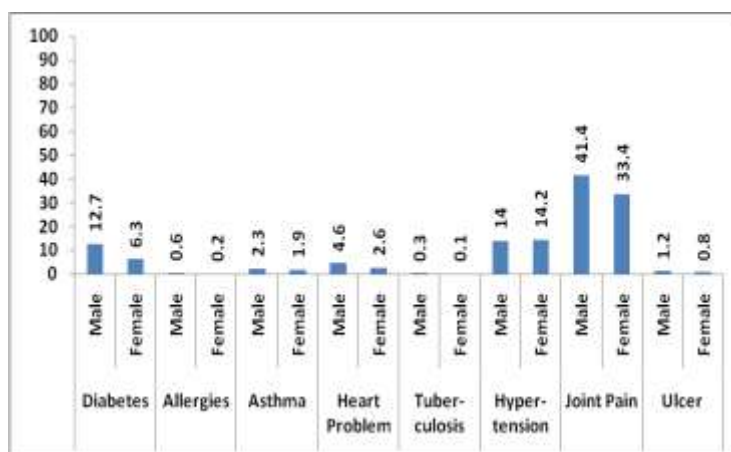

Out of all surveyed elders, almost 1.5% are reported to be disabled. All categories have reported at much less than 1% level. Speaking disability was at the lowest level of all. Details are available in Table 5.1 to Table 5.7.

Habits in Elders

Almost 78% of all elders do not have any habits of intoxication which is revealed by collected data. Out of all elders who have reported one habit or the other, highest percentage (almost 7.5%) is consuming locally brewed liquor, closely followed by 6.5% tobacco users and more than 3% beedi and almost 3% cigarette smokers. Gutkha and opium use were found at insignificant levels. Foreign liquor was consumed by 1.5% elders. Details are available in Table 6.1 to Table 6.7.

Disease Profile of Elders

Among the elders of the identified villages, joint pain has affected the highest percentage-almost 41.5% males and almost 33.5% females. 14% males and more than 14% females have reported to be suffering from hyper-tension. Diabetes was reported by more than 12.5% males and more than 6% females. More than 4.5% males and more than 2.5% females are having heart disease. More than 2% males and almost 2% females are suffering from Asthma.

Ulcer has affected more than 1% males and less than 1% females. All other diseases were reported at insignificant levels. Among all diseases, in case of only hyper-tension percentage of affected women is marginally more than men. For details please see Table 7.1 to Table 7.8.

Further details on all the aspects related to elders are available in the tables presented below.
